

DO I NEED A PERMIT?

Certain agency permits are required for any work that has the potential to affect the quality of the White River and its tributaries. Understanding the permits that are required for a new development or modification within the City of Anderson will minimize the potential for stormwater pollution.

Permit requirements for construction vary by project, and may include the following:

CITY STORMWATER PERMIT

Construction of new drainage facilities must follow certain construction standards for the City of Anderson.

RULE 5 EROSION CONTROL PERMIT

An erosion control permit is required from the Indiana Department of Environmental Management for any construction project that disturbs more than one acre.

**Stormwater Utility Department
Anderson, Indiana**

Kris Ockomon, Mayor

Construction sites are a leading cause of stormwater runoff pollution in Indiana.

Each year over 100 million tons of soil erodes from agricultural and urban areas. Much of that soil enters our streams, rivers, and lakes.

Sediment in roads caused by construction site runoff can be a safety hazard.

Install a gravel drive to help keep sediment on the site and prevent it from being tracked onto the road.

Silt fences are properly installed and maintained only 58% and 34% of the time, respectively. Follow manufacturers' instructions for effective erosion and sediment control.

Vegetated lots have a higher resale value. Reseed lots for financial gain.

Inspect erosion control practices weekly and after every storm event.
