

## How to Figure the General Service Single Phase Rate

---

### **Base Rate**

<b>Customer Charge:</b>	<b>\$13.50</b>
<b>Energy Charge:</b>	
<b>The First 1000 KWH</b>	<b>\$0.10121</b>
<b>All Above 1000 KWH</b>	<b>\$0.08632</b>

### **Example**

**Suppose you used 8000 KWH.**

- 1. Your bill would start with the \$13.50 customer charge.**
- 2. Your first 1000 KWH would be multiplied by \$0.10121, which would be \$101.21.**
- 3. All above 1000 KWH would be multiplied by \$0.08632, which would be \$604.24.**
- 4. Your base cost would be the total of these charges plus sales tax.**

### **Tracker**

**In addition to the base rate charge there is a rate adjustment based upon the cost of purchased power. This can be a positive or negative figure. Because this changes every three months, it is not used in the example. We call this the [tracker](#).**
